

Mohamed Ayman Suleiman

Aspiring Data Science Engineer | Final-Year Computer Science Student
Cairo, Egypt • +201281079916 • mohmdwe75@gmail.com • www.linkedin.com/in/mohmad-ayman •
github.com/mohmadAyman75

PROFESSIONAL SUMMARY

Final-year Computer Science student specializing in Data Science, with hands-on experience building end-to-end AI systems including NLP, Computer Vision, Multimodal AI, and RAG pipelines. Completed multiple certifications in Data Analysis, Data Science, and AI from NTI, Route Academy, and NVIDIA. Eager to apply technical skills to real-world AI and data-driven problems.

EDUCATION

B.Sc. in Computer Science – Data Science Track

- Helwan National University (HNU) — Helwan | Expected Graduation: 2027 | CGPA: 3.3

Work Experience

AI Technical Instructor — GDG on Campus, Helwan National University

(Sep 2026 – Present)

- Deliver comprehensive AI training sessions, covering foundational concepts through advanced topics.
- Explain complex AI concepts through clear, structured lessons tailored to students' levels of understanding.
- Connect AI theory with practical examples to strengthen students' understanding of real-world applications.

Training Experience

AI For business Trainee — NTI | 120 Hours

(Oct/2025)

- Delivered a 120-hour AI for Business training program, applying machine-learning models to real-world business datasets.
- Applied supervised and unsupervised learning techniques using Python, Pandas, Scikit-learn, TensorFlow/PyTorch.
- Worked on practical assignments and project-based case studies covering model evaluation, deployment, and real-world AI solutions. [GitHub](#)

Data Analytics Trainee — NTI / ITIDA | 120 Hours

(Aug/2025)

- Completed intensive training in Data Analytics, including 90 technical hours and 30 freelancing hours.
- Applied data analysis techniques using Python, Excel/Power BI, and core data visualization concepts.
- Worked on practical tasks focused on data cleaning, ETL, dashboard building, and business insights generation. [Linkedin](#)

Agentic AI and Generative AI System Developer— DEPI

(Jul/2026)

- Enrolled in the Agentic AI and Generative AI System Developer track.
- Developing practical skills in Generative AI, Transformers and LLMs, advanced prompting, Hugging Face models, RAG.
- Training in Agentic AI, multi-agent systems, AI app/UI development, deployment, monitoring, and capstone project delivery.

Freelance Data & AI Services — Online Platforms

(Jan/2026)

- Actively building an independent freelance presence across platforms including Upwork, Mostaq, Khamsat, and Freelancer, offering AI and data science services.
- Published service listings and portfolio projects covering ML/DL model development, Arabic & English sentiment analysis,

and computer vision applications.

- Continuing to expand this freelance portfolio (e.g., ChestVision AI) alongside academic coursework.

TECHNICAL SKILLS

Programming & Fundamentals

- Python, SQL, Java, C, C++, R, Object-Oriented Programming, Data Structures & Algorithms

Machine Learning & Deep Learning

- PyTorch, TensorFlow, Keras, Scikit-learn
- NLP: Transformers, BERT, LSTM, GRU
- Computer Vision: OpenCV, YOLOv8, MediaPipe
- Multimodal AI

Generative AI & RAG

- LLMs, RAG, LangChain, LlamaIndex, ChromaDB, Ollama

Data, Databases & Deployment

- Pandas, Excel, Power BI
- DuckDB, MySQL, SQLite, MongoDB
- FastAPI, Flask, Streamlit, Docker
- Web Scraping: Scrapy, BeautifulSoup

KEY PROJECTS

QueryMind AI – Safe Local Data Assistant (Individual Project)

Python, Streamlit, DuckDB, Ollama, Qwen2.5-Coder 7B, Pandas, SQLGlot, Scikit-learn, Plotly

- Built a local AI assistant for answering English and Arabic questions over e-commerce, CSV, and Excel data without external AI APIs.
- Developed a Text-to-SQL pipeline using exact-schema retrieval, SQLGlot AST validation, read-only DuckDB execution, and automatic SQL repair.
- Created semantic business views and automatic routing for text answers, data tables, and interactive Plotly charts.
- **GitHub:** https://github.com/mohmadAyman75/QueryMind_Ai.git | **LinkedIn:** [View Post](#)

Kvasir-SEG Multi U-Net Comparison – Medical Image Segmentation Project

Python, PyTorch, U-Net, Attention U-Net, U-Net++, TransUNet-style Hybrid, Streamlit

- Built a consistent Kvasir-SEG workflow to train and fairly compare four U-Net-style segmentation models.
- Evaluated the models using Dice and IoU, reaching a best validation Dice of 0.793 and IoU of 0.686 by epoch 22.
- Developed a Streamlit viewer for comparing prediction overlays, probability maps, and model-voting results.
- **GitHub:** <https://github.com/mohmadAyman75/kvasir-seg-multi-unet-comparison> | **LinkedIn:** [View Post](#)

MedChat – Pharmacy AI Assistant (Team Project)

TensorFlow, Transformers (AraBERT), Flask, Scikit-learn, LlamaIndex, LLM

- Fine-tuned AraBERT and BERT models to classify patient queries into Low, Medium, or High safety risk.
- Built a Flask /predict API and curated Arabic safety data for training and evaluation.
- Integrated the safety model into the team's RAG pipeline and achieved 92% F1-score on a held-out test set.
- **GitHub:** <https://github.com/AMRYB/MedChat> | **LinkedIn:** [View Post](#)

CERTIFICATIONS & LICENSES

- Machine Learning — NVIDIA (Aug/2025)
- AI & ML — Route Academy (Dec/2025)
- Building LLM Applications With Prompt Engineering (NVIDIA) (Dec/2025)
- AI for All: From Basics to GenAI Practice (Nov/2025)

- Intro to AI — BUE

(Oct/2025)
